

Bicycle park

Foto autors Ventspils Photo Archive

2025. The bike park, which opened in the spring of 2025, has become a great addition to the city’s active recreation and sports infrastructure. The bike park is accessible to everyone, regardless of age and experience. The design of the Ventspils bike park is special and unique in that this is the **first such two-level track in Europe and the third in the world**. This is the beginning of a new *pumptrack* era, setting a new challenging bar for future tracks and bike parks.

The bike park has three zones with tracks for different age groups and means of transportation, such as bicycles, roller skates, skateboards, and scooters:

Northern part of the track – suitable for beginners and children.

The large southern track – with various roller coasters, trick areas, a double bend and a passable tunnel. The track is designed to reduce the risk of collision.

The adventure track “BTA Velizinis” – modular elements that simulate obstacles found in the city (stairs, pits, curbs) will help beginners learn driving skills.

Ventspils bike park is free of charge for every visitor – the track can be used, observing safety measures and using protective equipment. The bike park territory is equipped with both park lighting and special floodlights. Thanks to such lighting, it will be possible to hold classes and competitions also in the evening hours. To ensure general order and compliance with safety regulations, video surveillance has been installed in the bike park.

Come and try this unique bike park for yourself!
